Given advances in solid state metering and the integration of RF (radio frequency), Itron is pleased to offer the Intelis Gas Meter, an exceptionally compact and feature-rich ultrasonic solid-state residential gas meter with integrated radio frequency communications, temperature sensing, and internal safety shutoff valve.

At only 4½ pounds, the Intelis Gas Meter is the lightest residential gas meter available in the North American market. Intelis has 6" center-to-center hub connections so field retrofits are easily accomplished. Intelis builds on Itron’s latest RF communications module, enabling the option for mobile mode or network mode, allowing flexible and migratable operation in AMR or AMI environments. In addition, Intelis is equipped with an internal safety shutoff valve on the outlet of every meter. Intelis delivers distributed intelligence to gas metering by providing the ability to self-monitor and shut off the flow of gas during a high flow incident, independent of operator involvement or the RF reading topology, similar to the function of an excess flow valve. Leveraging Intelis as part of a smart gas communication platform enables utilities to automatically make intelligent decisions across the gas distribution network, delivering opportunities for operational savings and enhanced customer and employee safety by potentially preventing an explosion.

**Key Features**

- Compact size
- Integrated safety shutoff valve with a precision seal that exceeds ASME B16.33 gas tightness guidelines
- High flow alarm
- Air detection alarm
- High temperature alarm
- Embedded RF communications
- +/- 0.5% accuracy at room temperature
- UL Class I, Division 1
- Retrievable TC and NTC volume
- Whisper quiet operation
- Measurement Canada approved: AG-0642
**ULTRASONIC MEASUREMENT PRINCIPLE**

Ultrasonic meters are state of the art technology and have been around for many decades, dating back to their introduction in the 1960’s and commercial applications in the 1970’s in Japan. Technology advancements have made them more affordable for the residential market. Europe and Asia are currently leading residential solid state installations.

Time of flight single path measurement method utilizes two transducers, one is upstream and one downstream of the gas flow. One transducer will emit an ultrasonic signal and the other will sense it, then the process will reverse. The difference in time for the ultrasonic signals to travel upstream versus downstream and the length between them is used to determine the velocity. Velocity multiplied by the cross sectional area of the measurement channel and time provide the volume. With gas flowing through the meter, the signal takes a shorter time to travel in the direction of gas flow and longer against it. At no flow conditions, the transit time is the same in the upstream and downstream directions.

**INTELIS GAS METER FEATURES**

A safety feature with a high flow alarm and an integrated valve that acts similar to an excess flow valve is standard in every Intelis meter. With an internal high flow alarm that is configurable by the utility, a threshold can be set in the meter indicative of an open fuel line downstream of the meter. This high flow event automatically triggers the shutoff valve to close, potentially preventing an explosion and property damage or even loss of life. This safety feature is a key demonstration of intelligence at the meter and will work in both mobile and network mode. It is mandatory to be on-site at the meter to re-open the valve to ensure safe conditions.

An air detection alarm can be triggered notifying the utility that air was detected in the meter. This can be used for potential tampering information, for example if the meter was removed from installation.

Reverse flow detection function will determine if gas is flowing from the outlet to inlet instead of in the standard operating direction. An alarm will be logged and this can be used for potential tampering information.

**A Look Inside Intelis**

Ultrasonic Measuring Unit (UMU)

Dust Trap and Filter

Inteligas Meter is an impressive 70% size reduction of the traditional diaphragm meter.
A high temperature alarm can be utilized to notify of a potential fire or other dangerous conditions and optionally the valve can be programmed to close upon high temperature detection.

The Intelis Gas meter offers the most flexibility in RF reading options of any Itron gas module. It is designed to be read by legacy ChoiceConnect™ and mobile readers and also under Itron’s OpenWay® Riva™ and GenV Industrial Internet of Things (IIoT) networks. With new features for IoT operation like firmware download, sub hourly interval data and extended data storage, the integrated RF communications offers additional value while continuing to offer the highest in reliability, accuracy, battery life, security standards and intrinsic safety that you have come to expect from the industry leader in gas modules.

This smart meter features on-board self-diagnostics including monitoring of transducer failure, remaining battery capacity and gas temperature. Itron continues its long-standing tradition of superb battery life performance. The entire meter package has a 20-year battery life including the meter, RF communications and valve when using recommended parameters.

Intelis includes a secondary retrievable index read. An NTC meter has the ability to retrieve through AMR/AMI the TC volume and vice versa, to aid utilities in analysis purposes.

The accuracy of Intelis is designed to meet applicable requirements in ANSI B109.1 as well as ANSI B109.0 draft and Measurement Canada PS-G-06 Class 1. In addition, Intelis will achieve +/- 0.5% at room temperature from 20-300 SCFH. There are no moving parts for ultrasonic measurement, therefore it is highly unlikely to lock-up due to contamination or freezeups within the gas stream. The meter is less likely to drift over time.

% Error vs Flow Rate

<table>
<thead>
<tr>
<th>Error (%)</th>
<th>Blue = accuracy (+19F/-7.2C to +131F/55C)</th>

### SPECIFICATIONS

#### General Specifications
- **Meter Capacity**: 250 CFH at 1/2” WC / 7.1 m³/h @ 0.125 kPa
- **Measurement Principle**: Ultrasonic time of flight
- **Accuracy**: Class 1 and +/- 0.5% at room temperature
- **Meter Type**: Temperature compensated (TC) or non-temperature compensated (NTC)

#### Component Materials
- **UMU (ultrasonic measuring unit)**: PBT + PC (Polybutylene terephthalate + Polycarbonate)
- **Valve Plastics**: PBT (Polybutylene terephthalate)
- **Inlet & Outlet Tubes**: POM (Polyoxymethylene)

#### Operating Temperature Ratings
- **Measurement**: -30°F (-34°C) to +131°F (55°C)
- **Valve**: -13°F (-25°C) to +131°F (55°C)
- **RF Communications**: -40°F (-40°C) to +158°F (70°C)
- **LCD**: -40°F (-40°C) to +185°F (85°C)*

#### Storage Temperature Rating
- **Measurement/Valve/RF**: -40°F (-40°C) to +158°F (70°C)

#### Software
- **Minimum Software Required for Mobile and Riva**® **Network**
  - Field Collection System (FCS) 4.2.4
  - Field Deployment Manager (FDM) Tools 4.2 (4.3.1 if LSCD)
  - Itron Mobile 2.3
  - Itron Security Manager (ISM) 3.6
  - Mobile Collection 3.8.2

- **Minimum Software Required for Gen5 Network**
  - Gen3, 4, 5 CPD hardware running UtilOS® 5.0
  - FCS 4.3.1 with Itron Mobile 2.5
  - FDM Tools v4.3
  - ISM 4.2
  - UtilityIQ® 4.15

* Electro-optical characteristic and optical performance is affected during high temperature operation (approximately 176°F/80°C to 185°F/85°C) and low temperature operation (approximately -22°F/-30°C to -40°F/-40°C). Performance recovers under normal temperature range.

** Refer to GSR5.0 Compatibility Matrix for OpenWay Riva Network Software Required: INF-7220-000
