

The Itron logo is located in the top left corner. It consists of the word "Itron" in a white, sans-serif font, with a yellow lightning bolt icon above the letter 'o'. The logo is set against a red rectangular background.

Itron

The background of the entire page is a photograph of a business meeting. Several people in business attire are gathered around a table, looking at a tablet computer. One person's hand is pointing at a colorful data visualization on the screen. The scene is brightly lit, suggesting an office environment.

IEE Wholesale Settlement

Wholesale Settlement Data Flow

Most utilities deal with Independent System Operators (ISO) or Regional Transmission Organizations (RTO) as part of their market settlement and market rules. In many cases, each ISO/RTO has slightly different market rules as it pertains to the wholesale settlement process in their individual market. Utilities that cross ISO/RTO boundaries often deal with creating a different settlement process for each ISO/RTO that they deal with.

The IEE Wholesale Settlement module provides a more complete and simple way to manage settlement data for either a single ISO, multiple ISOs or even RTOs. The module ensures that the data provided to the ISO/RTO is consistent, conforms to utility business rules and is completely validated, tracked and versioned. The wholesale settlement module provides a single database for critical settlement usage data used. Using the module alleviates

editing and synchronization across multiple databases as well as manual adjustments.

Employing IEE as the basis for wholesale settlement allows you to collect data from multiple head end systems. This eliminates manual consolidation work, import and reformatting of data, and other activities that can introduce errors into the settlement data set. Reducing handoffs is key to reducing lost data and corrupted data sets. IEE's Wholesale Settlement module modernizes manual processes, reduces the cost of settlement and reduces process time to provide timely data to the ISO/RTO.

IEE, coupled with the Wholesale Settlement module, is the quickest, simplest way to update your settlement processes at a fraction of the cost of managing and maintaining separate settlement systems.
